

**Exam** : **C90.05**

**Title** : **Advanced Cloud  
Architecture**

**Version** : **DEMO**

1.The storage management portal is a portal that provides management features for

- A.Vertically tiered cloud storage devices
- B.Horizontally scaled cloud storage devices
- C.Block-based storage devices
- D.Alltypesof cloud storage devices

**Answer: D**

2.Which pattern can be applied to establish a failover system for cloud storage devices that enables continuous data access for cloud consumers?

- A.Direct LUN Access
- B.Redundant Storage
- C.Storage Workload Management
- D.Intra-Storage Device Vertical Tiering

**Answer: B**

3.The application of the Intra-Storage Device Vertical Tiering pattern establishes a system that optimizes the availability of different disk types of the same capacity.

- A.True
- B.False

**Answer: B**

4.Applying the Dynamic Failure Detection and Recovery pattern establishes a \_\_\_\_\_that can monitor and respond to runtime failure conditions.

- A.Watchdog system
- B.Capacityplanner system
- C.Failover system C
- D.Intelligent automation engine

**Answer: A**

5.After applying the \_\_\_\_\_pattern, a system is established in which a \_\_\_\_\_is used to provide virtual servers with direct access to LUNs.

- A.Direct LUN Access, hypervisor
- B.Redundant Storage, cloud storage device
- C.Direct LUN Access, physical host bus adapter card
- D.Redundant Storage, virtual switch

**Answer: C**
